

INTERACTIONS

LEARNING OBJECTIVES

- Use jQuery to select and update elements in the DOM.
- Write jQuery code to detect and react to events in the DOM.
- Practice thinking and working through some common JavaScript interactions.

ANIMATION

TRIGGERING TRANSITIONS

TRIGGERING TRANSITIONS

There are two ways to trigger CSS transitions:

1. Using the :hover CSS pseudo-class
2. Adding a class with jQuery

FEWD

JQUERY EVENTS — PART 2

↓
`$('#li').on('event' , function() {
 // your code here
});`

MOUSE

click
dblclick
mouseenter
mouseleave

KEYBOARD

keypress
keydown
keyup

FORM

submit
change
focus
blur

DOCUMENT

resize
scroll

click
dblclick
mouseenter
mouseleave

```
$( 'li' ).on( 'event' , function() {  
  // your code here  
});
```

JQUERY METHODS — THE EVENT OBJECT

- The event object has properties and methods that tell you more about the event that took place.
- By using the `preventDefault()` method, the default action of the event will not be triggered.

Parameter name

```
$( 'a' ).on( 'click', function( event ) {  
    event.preventDefault();  
});
```

Same name as above

Stop page from reloading

A diagram illustrating the jQuery `on` method. The code `$('a').on('click', function(event) { event.preventDefault(); });` is shown. Above the parameter `event` in the function signature, the text "Parameter name" is written in red, with a red line pointing to `event`. Below the `event` property access `event.preventDefault()`, the text "Same name as above" is written in red, with a red line pointing to `event`. Below the `preventDefault()` method call, the text "Stop page from reloading" is written in teal, with a teal line pointing to `preventDefault()`.

WHEN TO PREVENT THE DEFAULT ACTION

- So when do I need to prevent the default action?

1. WHEN THE SELECTOR FOR OUR EVENT IS AN ANCHOR:

```
$('#a').on('click', function(event) {  
    event.preventDefault();  
});
```

2. WHEN THE TYPE OF EVENT IS A SUBMIT EVENT:

```
$('#form').on('submit', function(event) {  
    event.preventDefault();  
});
```

JQUERY METHODS — THE THIS KEYWORD

- Allows us to select the element that the user just interacted with.
- In other words, the element that just triggered the event

```
$('#a').on('click', function() {  
    $(this).fadeOut(350);  
});
```

The element we
just interacted
with

KEYBOARD

keydown

keyup

```
$( 'li' ).on( 'event' , function() {  
  // your code here  
});
```

submit

change

focus

blur

```
$( 'li' ).on( 'event' , function() {  
  // your code here  
});
```

resize
scroll

```
$( 'li' ).on( 'event' , function() {  
  // your code here  
});
```

MOUSE

click
dblclick
mouseenter
mouseleave

KEYBOARD

keypress
keydown
keyup

FORM

submit
change
focus
blur

DOCUMENT

resize
scroll

```
$('li').on( 'event' , function() {  
  // your code here  
});
```

PROJECT MILESTONE #2 — HTML / CSS

- Don't feel like you have to get everything perfect right off the bat! Just start writing. Here is what tonight should look like:
 1. ~2 hours: Content/HTML — Structure, structure, structure! Start writing your content and html. Don't be intimidated! For this portion of the project, feel free to use "placeholder" text and images. Don't spend too much time on coming up with your final content, just get your HTML in place.
 - Placeholder text: <http://www.lipsum.com/>, <http://baconipsum.com/>
 - Placeholder images: <https://placekitten.com/>, <https://placeholder.it/>
 - High resolution stock images: <https://unsplash.com/> !!!!
 2. ~2 hours: CSS

PROJECT MILESTONE #2 — HTML / CSS

- Don't feel like you have to get everything perfect right off the bat! Just start writing. Here is what tonight should look like:
 1. ~2 hours: Content/HTML
 2. ~2 hours: CSS — Make it pretty!
 - ~15 mins — Come up with a basic styleguide. Pick 2 or so fonts and 3 - 5 colors for the site.
 - Need help coming up with a color scheme? [Adobe Khuler](#)
 - ~30 mins — Start by getting everything roughly where it needs to be — set up your columns, etc. It might be helpful to use Pesticide or add a border to everything (* {border: 1px solid red}) for this step.
 - ~20 mins — Work on most general styles. Base font styles, colors, etc.
 - ~55 mins — Fill in the details. You'll want to Google, Google, Google!

LEARNING OBJECTIVES

- Use jQuery to select and update elements in the DOM.
- Write jQuery code to detect and react to events in the DOM.
- Practice thinking and working through some common JavaScript interactions.
